## USEFUL WATER and WASTEWATER FORMULAS

Dosage mg/l = (chemical feed, lbs/day)  $\div$  (MGD x 8.34)

Chemical feed,  $lbs/day = MGD \times 8.34 \times mg/l$  Note: Divide your answer by the % purity of the chemical if it is not 100%.

1% = 10,000 mg/l

$$^{\circ}F = (^{\circ}C \times 9 \div 5) + 32^{\circ} - \text{or-} (^{\circ}C \times 1.8) + 32^{\circ}$$

$$^{\circ}$$
C = ( $^{\circ}$ F - 32 $^{\circ}$ ) x 5 ÷ 9 -or- ( $^{\circ}$ F - 32 $^{\circ}$ ) ÷ 1.8

Efficiency,  $\% = [(in - out) \div in] \times 100$ 

1 HP = 0.746 Kw

Water HP = (gpm x head, ft)  $\div$  3960

Brake HP = (gpm x head, ft)  $\div$  (3960 x pump efficiency)

Motor HP = (gpm x head, ft)  $\div$  (3960 x pump efficiency x motor efficiency)

Motor efficiency = (gpm x head, ft x 0.746)  $\div$  (3960 x Kw)

Average (geometric mean) = [(X1)(X2)(X3)(X4)(Xn)] 1/n [The nth root of the product of n numbers]

Detention time = volume  $\div$  flow

Flow,  $ft^3/sec = (area, ft^2) \times (velocity, ft/sec)$ 

Velocity = distance  $\div$  time

Surface Loading,  $gpd/ft^2 = (flow, gpd) \div surface area, ft^2$ 

Weir overflow,  $gpd/ft = flow/gpd \div weir length$ , feet

Lagoon organic loading, lbs BOD/acre = BOD applied, lbs ÷ surface area, acres

Trickling filter organic loading, lbs BOD/day/1,000 ft<sup>3</sup> = BOD applied, lbs per day  $\div$  1,000 ft<sup>3</sup>

MLVSS, lbs = (BOD, mg/l x flow, MGD x 8.34)  $\div$  F/M desired

 $F/M = BOD lbs/day \div MLVSS$ , lbs

 $SVI = (settleability, ml/l \times 1000) \div MLSS, mg/l$ 

TSS, mg/l = [(crucible & dry sample wt, g - crucible wt, g) ÷ sample volume, ml] x 1,000,000

BOD,  $mg/l = [(initial DO, mg/L - final DO, mg/l) \div sample volume, ml] x sample size (1000 or 300)$ 

Concentration: concentration (1) x volume (1) = concentration (2) x volume (2)  $V_2 = (C_1 \times V_1) \div C_2$   $C_2 = (C_1 \times V_1) \div V_2$ 

Filtration rate  $gpm/ft^2 = flow$ ,  $gpm \div surface$  area,  $ft^2$ 

Backwash rate,  $gpm/ft^2 = backwash flow$ ,  $gpm \div surface$  area,  $ft^2$ 

Specific capacity = yield ÷ drawdown

yield = gpm drawdown = static level – pumping level
